Cover Letter

Dear Hiring Team,

I am applying for the Software Engineer role at CLSN. I build production web applications with React, Next.js and TypeScript, and I ship them to live URLs rather than leaving them as experiments.

My most recent product is Dainty Proofreader at daintyproofreader.com, a commercial AI proofreading app with a React frontend, a Node.js backend and streaming LLM integration. I also built JsonExport at jsonexport.com, a Next.js tool that converts large JSON files to Excel and CSV entirely in the browser, and I led frontend work on 49Blox, a live marketplace for trading fractional music rights.

Since 2020 I have worked independently, owning every project from requirements through deployment. In 2026 I also contracted as a web accessibility engineer, fixing enterprise sites for WCAG compliance. I hold an M.Sc. in Cyber Security from the University of Ibadan and a B.Sc. in Computer Science from Kogi State University, so I build with security and quality in mind by default.

I live in Lagos, I have completed my NYSC, and I am available to start quickly. I would be glad to walk you through any of the live projects listed on my CV.

Thank you for your time.

Best regards,

Olorunfemi John
